

Comienzo – Quantum Playground

Comienzo is our quantum playground, it is a cloud based offering and has a Circuit Designer and Visualization of Results. It supports 20+ Qubits and 20+ Gates. It is meant for mass scenarios like Classrooms, Labs, Courses, Employee Trainings, Upskilling, Certifications, Exams etc. where 100's of people who are new to Quantum Computing visually try out quantum circuits and see the results. It also has dozens of canned examples of quantum circuits with explanations.

It doesn't require any setup on the users device and has no specific hardware needs either. The organization can purchase a subscription of 'n' users and can get started. It has a management console to manage the users of the organization, provision, deprovision them etc.

The users can also import/export circuits and execute them offline using many popular quantum programming frameworks.

This is the simplest way to get started with Quantum Computing
